

MBUSA Pricing Analytics Case Study – Candidate Instructions

Thank you for your interest in the Senior Analyst FS Programs & Retention role at Mercedes-Benz USA. This case study mirrors a real 1:1 working session with your manager. The goal is to understand your analytical reasoning, pricing logic, forecasting awareness, communication, and prioritization — not to produce a polished final presentation.

Objective

Leadership at MBUSA has observed inconsistent dealer pricing behavior, regional performance differences, and forecast variance. You have been provided a subset of sales, inventory, and competitive data to explore potential issues and identify next steps.

Your Task

You have been provided with a dataset to explore using any business analysis tool(s) you prefer (Excel, Power BI, SQL, Python, etc.). You do NOT need a polished or complete solution. Bring whatever progress you make to a 30-minute 1:1 check-in your manager (the hiring panel). This session will focus on your early findings and your approach.

During the 30-Minute Case Study Check-In

Be prepared to walk through:

- How you approached the dataset and where you started
- Any early trends, patterns, anomalies, or hypotheses
- Questions, assumptions, and risks you identified
- How you handled ambiguity or gaps in the data
- What you would focus on next with more time

Deliverables

- Your working file (Excel, Power BI, SQL/Python, etc.)
- Brief notes or a short summary of early findings
- A list of assumptions and open questions

You may bring notes or other working materials/files. Polished slides are not required or expected. Please email a copy of these materials to your manager in advance of the 1:1 session (mailto:beeline.kareem@mbusa.com).
